

Hechmet – Vertére Chemical Inventory Management System User Guide

March 2025

HECHMET - VIM

- **HECHMET** (**H**igher **E**ducation **C**ooperative for **H**azardous **M**aterial and **E**quipment **T**racking) is a consortium of Canadian universities using **Vertére Inventory Management (VIM)** software system.
- **Access** from any computer connecting to U of T network (includes VPN access):
<https://hechmet.vimenterprise.com/uot>
- **Contact**
Email: hechmet@utoronto.ca
Phone: 416-978-6641

What Items are required in Inventory?

- **Original** chemical containers with the following WHMIS pictograms are required to be in HECHMET, with a small quantity exemption: 5g (5mL) or less without an Acute Toxic pictogram. For chemical containers received before December of 2018, refer to [Safety Data Sheets](#).

Implementation

- **EHS Provides:**
 - User Guide, Training, Group/User/Location setup and update.
 - Pre-printed barcode labels.
- **Groups can Specify in Discussion with EHS:**
 - Group/user/location tree setup.
 - A list of rooms storing hazardous chemicals and whether they are shared with other PI(s).
 - Optional sub-locations (e.g., flammable cabinet, acid cabinet, Chemical shelf, fridge etc.)
- **Hardware:**
 - Barcode scanner (~\$50, PI or Department)
Recommend links: [scanner 1](#), [scanner 2](#) with the additional feature of reading barcodes from screens.

Ongoing Inventory Management

- **Recommendations to PIs**
 - Ensure all hazardous chemicals are in your HECHMET inventory.
 - Add newly received chemicals to HECHMET asap.
 - Remove the barcode labels from empty containers and scan to “Dispose” in HECHMET periodically.
 - Conduct Physical Inventory annually (may use a barcode scanner).
 - Provide training to all new lab members.
 - Contact EHS if you are moving labs.

Table of Contents

1.	<u>Login</u>	<u>7</u>
2.	<u>Chemical Inventory - Add</u>	<u>11</u>
3.	<u>Chemical Inventory - View/Update</u>	<u>25</u>
4.	<u>Chemical Inventory - Management</u>	<u>43</u>

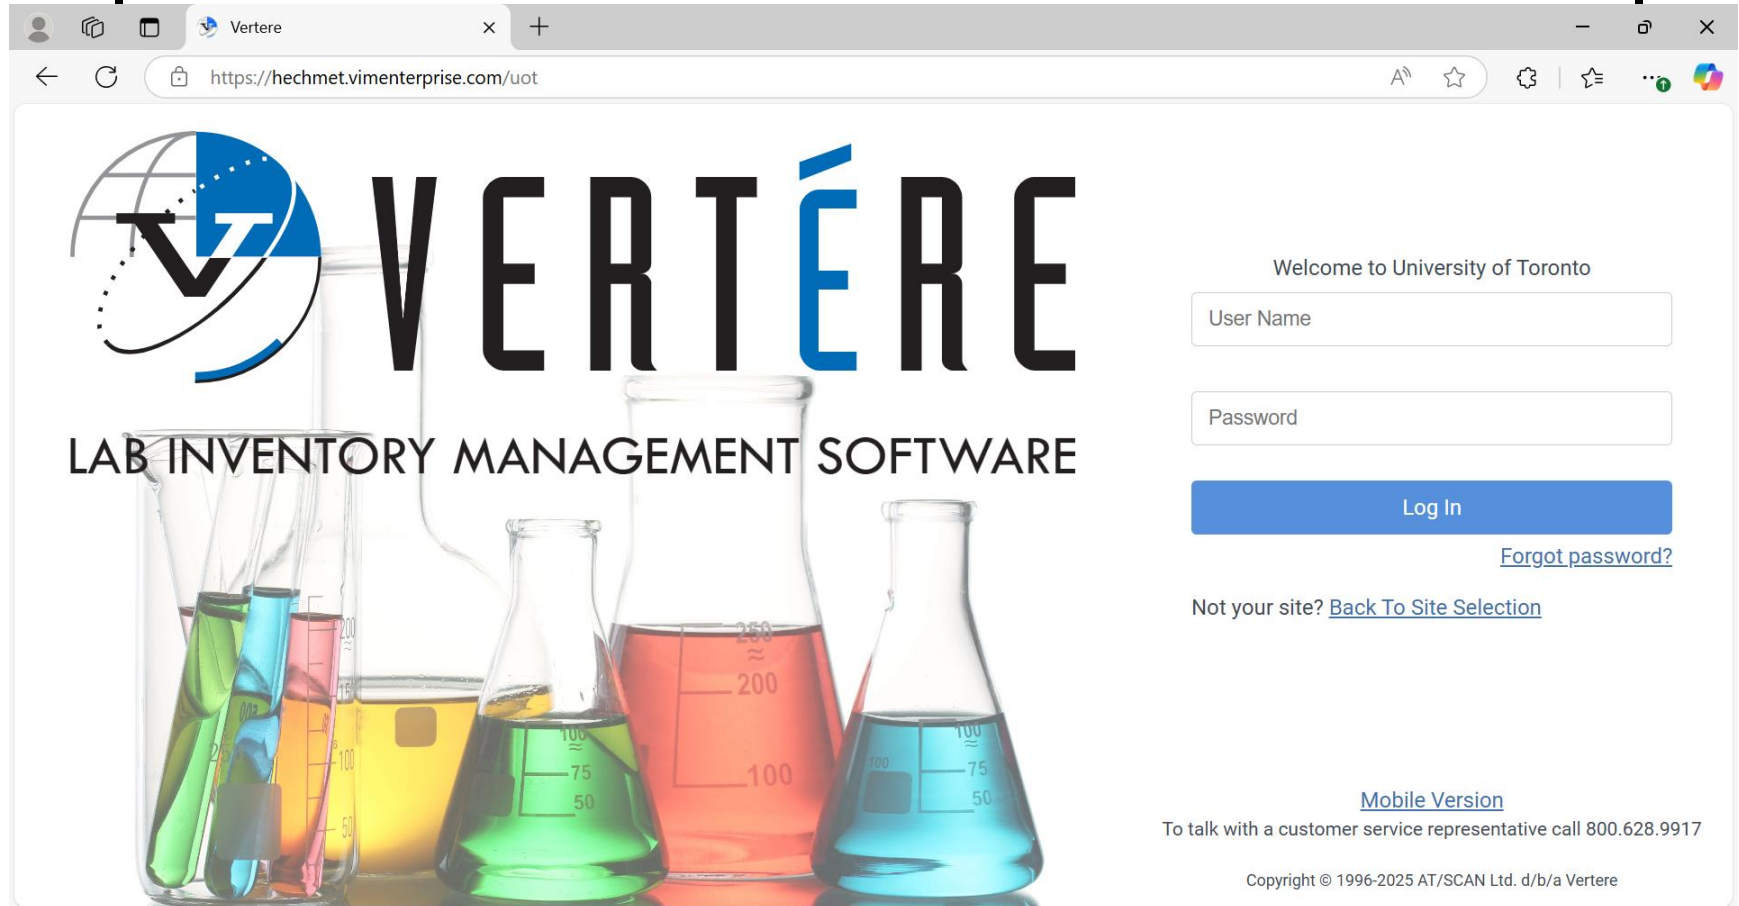

Access from any computer connecting to UofT network:

<https://hechmet.vimenterprise.com/uot>

User Name and initial **Password** will be assigned by EHS:

hechmet@utoronto.ca or wen.zhu@utoronto.ca

Group and User Accounts

- The HECHMET system follows a group tree structure.
- Each PI has a group under their respective department.
- In general, **three** user accounts (**User Name**) are assigned to each PI, each with a different role:
 - **PI**: add/update and manage inventory
 - **Lab manager**: add/update and manage inventory
 - **Lab user**: View inventory only

If you click on “Forgot Password”, a password reset link will be emailed to your PI’s email address. The link will expire after one hour.

Chemical Module

The screenshot shows the Vertere Inventory Management System home page. The browser address bar displays <https://hechmet.vimenterprise.com/home.aspx>. The page header includes the University of Toronto logo and the text "University Of Toronto". On the right, there are links for "Messages (0)" and "Logoff User:Ehs".

The left sidebar contains a navigation menu with the following items: Home, System (dropdown), Administration, Audit Log, SSO Configuration, Change Password, My Account, License Info, About System, and Modules & Services.

The main content area features an "Announcements" section with the following text:

Vertere
Module Trials Extended to 90 Days
All trials are now available for 90 days. If you have an active module trial, it has been extended from 14 days to 90 days. If you tried one of the modules before, you may now try it again for this longer trial period.
21-Feb-25 05:21 PM

Two arrows point from a text box to the "Change Password" link in the sidebar and the "Chemical" button in the main content area.

Change password after first login and every 6 months afterward. **Password must be at least 8 characters in length and is case sensitive.** Click "**Home**" after changing password to return to the main page. Click "**Chemical**" button to go to next page.

VERTÈRE University Of Toronto

Welcome To Chemical Module

To add inventory, click **Add**. Principal Investigators (PIs) and Lab/Store Managers have the right to **Add** chemicals to their inventory.

Chemical Inventory – Add: Inventory Catalog Search

First, perform a **Search** to find the chemical in system's shared Catalog used by HECHMET consortium.

Chemical : Add

Product No. Active Manufacturer

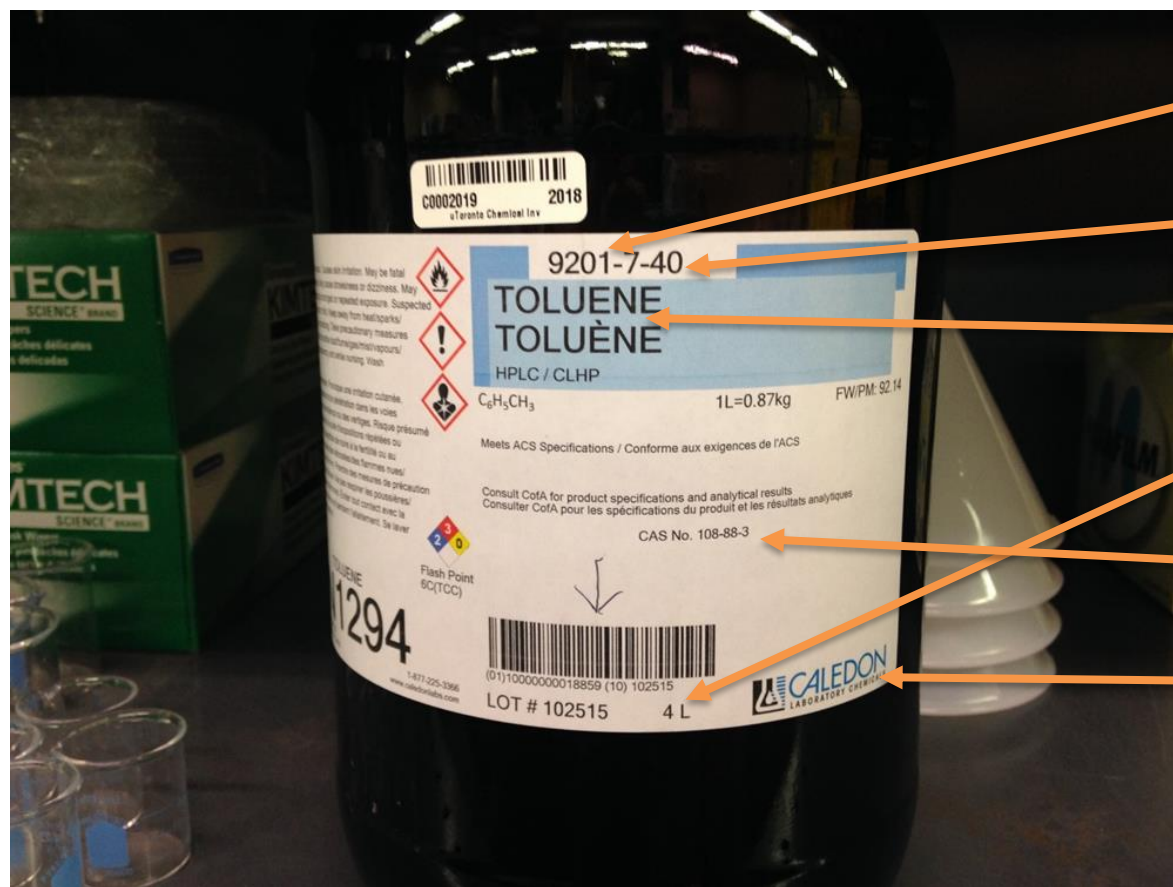

9201-7

Dispensing
Parent Tag

Search
Catalog Add
Clear

Use either the **Product No.** or the **CAS #** in your initial search. Repeat search if item not found by using the other product identifier. **Stock number** is a size-specific product number. **Vendor** is defined as the name displayed on the chemical container. See **next page** for an example. If no record is found, please send an email to hechmet@utoronto.ca, EHS staff will add the chemical to shared catalog for you. **PIs and lab managers are not able to access Catalog Add.**

Chemical Inventory – Add: Inventory Catalog Search: an example

Product No (Catalog No): 9201-7

Stock No: 9201-7-40

Product Name: Toluene

Amount (Package Size): 4L

CAS #: 108-88-3 or 108883

Vendor: CALEDON

Chemical Inventory – Add: Inventory Catalog Search Summary

- Search by:
 - **Product No. or Stock No (if available)**
 - **CAS #** (if available), and then sort results by Vendor or Name etc.
 - **Product Name**
 - **Vendor** (if small company)
 - If you are unable to find the item: take photo(s) including information of **Product Name, Product No., Package Size, Vendor and CAS #**(if available), and send photos to hechmet@utoronto.ca

Chemical Inventory – Add: Inventory Catalog Search Results

The screenshot shows the 'Add Item' page in the VERTÈRE system. A 'Catalog Search' modal is open, displaying search results for 'TOLUENE'. The modal includes a table with columns: Product Name, Product No., Amount, U-O-M, Stock Number, Vendor, CAS #, Category Member, and Manufacturer. Two results are shown, both for 'TOLUENE' from 'Caledon Laboratories'. The first result has a checkmark icon in the first column. A callout box points to this checkmark with the text: 'Click the **check mark icon** for the matching product line item. The catalog details of the product automatically populate on the screen.'

	Product Name	Product No.	Amount	U-O-M	Stock Number	Vendor	CAS #	Category Member	Manufacturer
✓	TOLUENE	9201-7	4.00	L	9201-7-40	Caledon Laboratories	108-88-3		
✓	TOLUENE	9201-7	1.00	L	9201-7-10	Caledon Laboratories	108-88-3

Use a **barcode scanner** to scan a HECHMET barcode to the **Barcode #** field (preferred). Alternatively, you can type the barcode number (double-check to ensure accuracy).

After selecting the location, the **PI** and **Group** associated with it will be displayed automatically. **Double-check** to ensure accuracy. **Note** that if the item is added to another PI and Group, you won't see the item afterward.

Chemical Inventory – Add: Item Add

Optional fields

There are other optional fields you can add, for example, **Receive Date** (highly recommended), **Custom Text 2** (where you can add detailed sub location info) etc. Click **Save** to finish adding the chemical to your inventory. If you are going to refill the container in the future, you must place a **check Mark** in **Refillable** box before clicking **Save**.

The screenshot shows the 'Add Item' form in the Hechemet Vimeter Enterprise system. The form is for adding a chemical item named 'TOLUENE'. It includes fields for Barcode #, Location, PI, Group, Alternate User, Item Quantity, Item Amount, State, and various optional fields like Receive Date, PO Number, Old Tag, Custom Text 2, Lot Number, Open date, Expiration Date, Adding Date, Custom Lookups, Container Type, and Refillable. The 'Save' button is highlighted with a red box.

Chemical Inventory – Add: Tips for affixing a barcode label on a chemical container

- For optimal barcode scanner readability, affix the HECHMET barcode label on a small **flat area** (~1.5"x0.5", either horizontally or vertically) on the container.
- To prevent barcode labels from falling off from the chemical containers, ensure the surface where the barcode will be affixed is **clean & dry**, especially containers stored in fridges and freezers.

View/Update – Structure Search

The screenshot displays the VERTÉRE Chemical: View/Update web application. The main window is titled "Structure Search" and contains a large central canvas for drawing or loading chemical structures. Above the canvas, a toolbar includes icons for file operations (load, save, copy, paste, delete), editing (undo, redo, zoom), and search (magnifying glass). Below the canvas, there are buttons for "Exact" and "Substructure" search, and a "Search" button. To the right of the canvas, a vertical list of chemical elements (H, C, N, O, S, P, F, Cl, Br, I, PT) is visible. On the left side of the interface, a sidebar menu lists various functions: Home, Chemical (Add, View/Update, Restore, Catalog, Physical Inventory, Download Reconcile), Setup (Settings, Tags, Locations, Users/Groups, Categories, Vendors), and a "Logoff User.Ehs" link. The bottom of the page features the University of Toronto logo and the text "Environmental Health & Safety".

Chemwatch
BORIC ACID
ChemWatch Review SDS
Chemwatch: 10059
Version No: 9.1.1.1
Safety Data Sheet

Chemwatch Hazard Alert Code: 3
Issue Date: 01/24/2016
Print Date: 01/09/2018
L.GHS.CAN.EN

SECTION 1 IDENTIFICATION

Product Identifier

Product name	BORIC ACID
Chemical Name	boric acid
Synonyms	3-Aminophenylboronic acid, polymer-bound, AFS TECH00005138 BF000004219 AR00000101, B(OH)3, B-H3-O3, Boorzuur, Borofax, Borsäure, Homborg's salt, NCI-C66417, Optibor, Redox BOACID70, Sassolite, UL00000042 UL00000102 TECH00000934, boric acid, boron hydroxide, boron trihydroxide, component of Aci-Jel, hydrogen borate, orthoboric acid, trihydroxydiboron, trihydroxyborane, trioxoboric (III) acid
Chemical formula	B-H3-O3[(C10H12BNO3)x
Other means of identification	Not Available
CAS number	10043-35-3

Recommended use of the chemical and restrictions on use

Relevant identified uses

Used for weatherproofing and fireproofing fabrics; as a preservative; manufacture of cements, crockery, porcelain, enamels, glass, borates, leather, carpets, hats, soaps, artificial gems; in nickel plating baths. The primary industrial use of boric acid is in the manufacture of monofilament fiberglass usually referred to as textile fiberglass. Textile fiberglass is used to reinforce plastics in applications that range from boats, to industrial piping to computer circuit boards. Also used in the manufacture of cosmetics; ointments and eye washes; printing and dyeing; photography; for impregnating wicks; hardening steel; in welding flux and copper brazing; insecticide for cockroaches and carpet beetles; fungus control for citrus fruits. Boric acid also prevents and destroys existing wet and dry rot in timbers. It can be used in combination with an ethylene glycol carrier to treat external wood against fungal and insect attack. It is possible to buy borate-impregnated rods for insertion into wood via drill holes where dampness and moisture is known to collect and sit. It is available in a gel form and injectable paste form for treating rot affected wood without the need to replace the timber. Concentrates of borate-based treatments can be used to prevent slime, mycelium, and algae growth, even in marine environments. Boric acid is added to salt in the curing of cattle hides, calfskins, and sheepskins. This helps to control bacteria development, and helps to control insects. Colloidal suspensions of nanoparticles of boric acid dissolved in petroleum or vegetable oil can form a lubricant on ceramic or metal surfaces with a coefficient of sliding friction that decreases with increasing pressure to a value ranging from 0.10 to 0.02. Self-lubricating H3BO3 films result from a spontaneous chemical reaction between water molecules and B2O3 coatings in a humid environment. In bulk-scale, an inverse relationship exists between friction coefficient and Hertzian contact pressure induced by applied load. Boron is used in pyrotechnics to prevent the amide-forming reaction between aluminum and nitrates. A small amount of boric acid is added to the composition to neutralize alkaline amides that can react with the aluminum. Boric acid is used in nuclear power plants as a neutron poison to slow down the rate at which fission is occurring. Natural boron is 20% boron-10 and about 80% boron-11. Boron-10 has a high cross-section for absorption of low energy (thermal) neutrons. By adding more boric acid to the reactor coolant which circulates through the reactor, the probability that a neutron can survive to cause fission is reduced. Therefore, changes in boric acid concentration effectively regulate the rate of fission taking place in the reactor. This method is only used in pressurized water reactors (PWRs)

The SDS provided by ChemWatch is compliant with GHS. However, it might take ~25 seconds to pull out the document. Please be patient.

To view ChemWatch and vendor's SDS etc., you can access the link to Chemwatch's GoldFFX directly from U of T network at:

To dispose of a **chemical**, click in the **Barcode #** field and scan the HECHMET barcode. Select the chemical by placing a **check mark** on the left side of the pencil icon. Click **Dispose** button. To dispose of **multiple chemicals** at the same time, continue to scan HECHMET barcodes in the **Barcode #** field, then place a check mark on “**Select all on page**”, click **Dispose** button.

Chemical Inventory - Management:

Dispose

The screenshot shows a web browser window with the URL <https://hechmet.vimenterprise.com/UpdateItem.aspx>. The page header includes the University of Toronto logo and the text "VERTÈRE University Of Toronto". The main heading is "Chemical: View/Update".

On the left is a navigation menu with items: Home, Chemical (expanded), Add, View/Update, Restore, Catalog, Physical Inventory, Download Reconcile, Setup (expanded), Settings, Tags, Locations, Users/Groups, Categories, and Vendors.

The main content area displays the "Dispose Inventory" form. A red box highlights the "Search > Dispose Inventory" link. The form fields include:

- Disposal Date:** 02-Mar-25
- Disposal Method:** A dropdown menu is open, showing options: Chemical/Container (5), Consumed (1) (highlighted with a red box), Entry error (4), Shipped (Waste), Sold (donate) (3), and Wash, rinse, dispose (2).
- Empty Container:** A checkbox is checked and highlighted with a red box.
- Approved By:** A dropdown menu with a user icon.
- Approved On:** A date field.
- Amount to Dispose:** A text input field.
- Amount Remaining:** 0.00
- Cancel** button.

Select “**Disposal Method**” and complete all the fields required, then click **Ok**. If you are disposing of a single container that is empty, be sure to mark the item as “**Empty Container**”. Click **Search** to return the main View/Update page.
