

Biosafety Permit Amendment Form: Adding Biological Agents and/or Research Projects

Instructions

Use this form to add new biological agents, to move biological agents from stored to in use, or to add or change projects to your current **Level 1 or 2** permit.

PI and Permit Information

Principal Investigator	Email	Phone #
Permit #	Expiry Date (mm/dd/yyyy)	

Biological Agents ([including Microbial Toxins as per PHAC HPTA Schedule 1](#))

For risk group information please refer to the [ePATHogen](#) website or the vendor website (e.g. ATCC). If you require additional space, please submit your list in a Word or Excel document.

Descriptive (full) Name Including Species	Scientific Name and Special Features	Risk Group	Biological agent will be used in conjunction with - select as applicable.

Subforms

Please complete and submit the following subforms along with this amendment form. Instructions for each subform are provided within the forms themselves and in the accompanying Guide document.

1. [Assessment of Potential for Dual-Use Subform](#) (Mandatory)
2. [Description of Research Activities Subform](#) (Mandatory)
3. [Biosafety Information Subform](#) (Mandatory)
4. [Viral Vectors Subform](#) (If Applicable)

Applicant Declaration and Signature

As the Principal Investigator, I declare that I am familiar with the contents of the University of Toronto Biosafety program, and that the above describes my amendment to my current permit, in its entirety. As the legally responsible individual I will continue to ensure that all research and/or teaching conducted under my direction conforms to the standards set out in the Biosafety Guidelines at the University of Toronto, as well as provincial, federal and international policies and regulations that govern research involving biological agents. Any major deviation from the project, as originally approved, will be submitted to the biosafety office for review and approval by the Biosafety Review Committee prior to its implementation. During the review of a biosafety amendment, revisions to the amendment form and/or associated subforms may be made to improve accuracy and clarity. These changes will be discussed with the applicant during the review process, except in cases involving minor corrections such as typos. Once the amendment is finalized, the permit holder is responsible for reviewing the updated document, including all edits. Any discrepancies or concerns should be promptly reported to the Biosafety Office at ehs.biosafety@utoronto.ca.	Principal Investigator
	Date

Biosafety Approvals

Work listed on this amendment results in a change to the current permit level: Yes No

Biosafety Committee Veterinary Reviewer (if applicable)	Date	Subject Matter Expert (if applicable)	Date
University Local Biosafety Committee Chair	Date	University Biosafety Officer	Date
Conditions and/or Comments:			

Provisions for VIABLE Human Pathogens

It is important for people working with pathogens to be aware of symptoms of infection so that should they become infected, appropriate action can be taken. The information requested in the boxes refers to that for humans. EHS suggests using [PSDS](#), [CDC](#), or [Public Health Ontario](#).

Please list the following criteria for pathogenic risk group 2 agents listed in on this amendment.

	Infectious Agent 1	Infectious Agent 2	Infectious Agent 3	Infectious Agent 4	Infectious Agent 5
Name of Biological Agent					
Mode of Transmission					
Incubation Period					
Period of Communicability					
Infectious Dose					
Typical Presenting Symptoms					
Mode of Decontamination					
Emergency Response
